

## MASTER COURSE OUTLINE

A. BIOL 1030 Human Biology

B. COURSE DESCRIPTION:

This course is an introductory study of human biology. The scientific method, biological molecules, and cell biology will be studied as a foundation to learning human histology (the study of tissues) and organ systems. Each human organ system will be investigated to develop an understanding of its contribution to the human body. Current health and social issues, and other diseases related to human biology, will also be studied.

**MnTC (Goals 3/NS and 2/CT); (3 Cr – 2 lect, 1 lab)**

C. \*MnTC Discipline: Natural Sciences \*\*Core Theme: Critical Thinking

D. MAJOR CONTENT AREAS:

- Scientific method
- The metric system
- Biological molecules
- Cells and cell division
- Histology (tissues)
- Nervous system
- Skeletal system
- Muscular system
- Digestive system
- Blood and cardiovascular system
- Lymphatic and immune systems
- Respiratory system
- Urinary and excretory systems
- Male and female reproductive systems
- Human genetics and genetic disorders

E. GOAL TYPE, OBJECTIVES, AND OUTCOMES:

<u>GOAL TYPE</u>	<u>OBJECTIVES</u>	<u>OUTCOMES</u>
<u>MnTC Goal 3a</u>	Students will be able to demonstrate understanding of scientific theories.	1. complete an analysis of an experiment, related to human biology, that will include identifying the independent, dependent, and control variables as well as the steps of the scientific method.

		<ol style="list-style-type: none"> <li>define and explain the principles of experimentally- verifiable biological theories, including cell theory, the theory of evolution, etc.</li> <li>define and explain the pertinent vocabulary terms related to outcomes 1 and 2 (above).</li> </ol>
<u>MnTC Goal 3c</u>	communicate their experimental findings, analyses, and interpretations both orally and in writing.	<ol style="list-style-type: none"> <li>communicate lab experimental findings, analyses, and/or interpretations in oral and written formats.</li> </ol>
<u>MnTC Goal 3d</u>	evaluate societal issues from a natural science perspective, ask questions about the evidence presented and make informed judgments about science-related topics and policies.	<ol style="list-style-type: none"> <li>research and report on a human disease,, considering the disease from societal, health, and scientific perspectives.</li> <li>include an analysis of the evidence regarding the disease reported upon (see outcome above), as well as make recommendations concerning public health policy in regard to this disease.</li> </ol>
<u>MnTC Goal 2a</u>	gather factual information and apply it to a given problem in a manner that is relevant, clear, comprehensive, and conscious of possible bias in the information selected	<ol style="list-style-type: none"> <li>complete an analysis of scientific findings relevant to human biology as part of the human disease report in MnTC Goal 3d.</li> <li>include a summary of the findings, an explanation of the context of the findings and the sources of error and/or bias or uncertainty in the evidence evaluated in the human disease report in MnTC Goal 3d.</li> </ol>
<u>MnTC Goal 2b</u>	imagine and seek out a variety of possible goals, assumption, interpretations or perspectives which can give alternative meanings or solutions to a given situation or problem.	<ol style="list-style-type: none"> <li>choose and analyze a research study on the selected human disease as part of the human disease report in MnTC Goal 3d.</li> <li>examine and analyze this selected study for underlying assumptions and/or bias on the part of the researcher.</li> <li>suggest an alternative perspective (and/or find a second study) that disputes the first study and explains the issue, solution, or finding from at least two points of view.</li> </ol>
<u>MnTC Goal 2d</u>	recognize and articulate the value assumptions which underlie and affect decisions, interpretations, analyses, and evaluations made by ourselves and others.	<ol style="list-style-type: none"> <li>provide a self-analysis of their report (specified in MnTC Goals 3d, 2a, and 2b above).</li> <li>identify the value assumptions inherent in their choice of disease, sources and public policy recommendations relative to the disease in the self-analysis specified above.</li> </ol>
<u>CS</u>	utilize analytical tools (real or simulated) to gather human biology relevant data necessary to test hypothesis and come to logical conclusions.	<ol style="list-style-type: none"> <li>demonstrate the use of any combination of real or simulated analytical tools, sensors, etc. in gathering data.</li> </ol>

		2. draw conclusions based on data analysis, and demonstrated through class or online discussions and/or written laboratory reports.
<u>CS</u>	process and evaluate current studies, reports, news, seminars etc. from various print, online, or other sources related to human biology.	1. demonstrate their understanding of current human biology issues through any combination of oral/online discussions, written works, or other assessment tools.

F. SPECIAL INFORMATION:

This course may require use of the Internet, the submission of electronically prepared documents and the use of course management software. Students who have a disability and need accommodations should contact the instructor or the Student Success Center at the beginning of the semester. This information will be made available in alternative format, such as Braille, large print, or current media, upon request.

G. COURSE CODING INFORMATION: Course Code C/Class Maximum 48; Letter Grade

Revision date: 09/28/10; 1/31/18

AASC Approval date: 3/6/18

<b>*Riverland Community College Disciplines</b>	<b>MnTC Goal Number</b>
Communication (CM)	<b>1</b>
Natural Sciences (NS)	<b>3</b>
Mathematics/Logical Reasoning (MA)	<b>4</b>
History and the Social & Behavioral Sciences (SS)	<b>5</b>
